The present sequence represents 3-PGDH protein, also known as serA, and is used in the course of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             produce L-serine. The activity of at least one phosphoserine and phosphoserine transaminase is enhanced in the organism. The organism is used for large-scale fermentation of L-serine for organism is used for large-scale fermentation of L-serine for organism is used for large-scale fermentation of L-serine for organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sugimoto M;

CC useful for preventing, treating or ameliorating medical conditions e.g.

Cby protein or gene therapy. Pathological conditions can be also

CC diagnosed by determining the amount of the new polypeptides in a sample

CC or by determining the presence of mutations in the new polypucleotides.

CC Specific uses are described for each of the polynucleotides, based on

CC which tissues they are most highly expressed in, and include developing

CC products for the diagnosis or treatment of cancer, neurodegenerative

CC disorders, developmental abnormalities and foetal deficiencies, blood

CC disorders, tumours, leukemias, diseases of the immune system, autoimmune

CC diseases, hepatic and renal disease, lymphomas, inflammation, allergies,

CC such as osteoporosis, arthritis or malignancies, diseases of testes.

CC lung or thymus, digestive/endocrine disorders, infections and AIDS. The

CC polypeptides are also useful for identifying their binding partners.

CC The present sequence represents human secreted protein (see descriptor

CC line for gene number and cone identification).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to nucleic acid sequences (AAV84411 to AAV84633) encoding human secreted proteins (AAW88534 to AAW88756). The secreted protein gene sequences are deposited with the ATCC under deposit numbers ATCC 97979, 97974, 97975, 97976, 97977, 209007, 209008, 209009, 209010, 209011, 209080, 209081, 209082, 209083, 209084, 209085, 209511. Host cells comprising recombinant vectors containing the nucleic acid sequences are used for the recombinant production of the secreted proteins. The polynucleotide and amino acid sequences are useful for are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated human genes and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                            sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               16-DEC-1999;

                                                                                                                                                                             The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of anti-sense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAB66169;

                                                                                                                                              AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA3730 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention.
                                                                                                                                                                                                                                                                                                                                                                New mammalian DNA sequences encoding transmembrane, receptor or secreted PRO polypeptides, useful for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions
                                                                                                                        Sequence

Ecretype antenna polypeptides in E. halochloris and E. halophila.";

Eur. J. Blochem. 205:917-925(1992).

-!- FUNCTION: ANTENNA COMPLEXES ARE LIGHT-HARVESTING SYSTEMS, WHICH TRANSFER THE EXCITATION ENERGY TO THE REACTION CENTERS.

-!- SUBUNIT: THE CORE COMPLEX IS FORMED BY DIFFERENT ALPHA AND BETA CHAINS, BINDING BACTERIOCHLOROPHYLL MOLECULES, AND ARRANGED MOST PROBABLY IN TETRAMBRIC STRUCTURES DISPOSED AROUND THE REACTION CENTER. THE NON-PIGMENTED GAMMA CHAINS MAY CONSTITUTE ADDITIONAL COMPONENTS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bacteria; Proteobacteria; gamma subdivision; Ectothiorhodospiraceac;

A; Description: catalyzes the oxidation of primary and secondary alcohols to aldeh a; Function: <FDH>
A; Description: catalyzes the oxidation by NAD+ of formaldehyde and glutathlone to A; Description: catalyzes the oxidation by NAD+ of formaldehyde and glutathlone to C; Superfamily: alcohol dehydrogenase; long-chain alcohol dehydrogenase homology C; Keywords: acetylated amino end: alcohol metabolism; homodimer; metalloprotein; F; 1-373/Product: alcohol dehydrogenase pertuge experimental Amary
F; 193-222/Region: beta-alpha-beta NAD nucleotide-binding fold F; 34, 66, 173/Rinding site: zinc, catalytic (Cys, His, Cys) #status predicted F; 96, 99, 102, 110/Binding site: zinc, noncatalytic (Cys) #status predicted                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Оp
alcohol dehydrogenase (EC 1.1.1.1) class III - horse
N;Contains: formaldehyde dehydrogenase (glutathione) (EC 1.2.1.1)
C;Species: Bugus caballus (domestic horse)
C;Species: Bugus caballus (domestic horse)
C;Species: Bugus caballus (domestic horse)
C;Accession: A33419
R;Kalser, R; Holmquist, B.; Vallee, B.L.; Joernvall, H.
Biochemistry 28, 8432-8438, 1989
A;Title: Characterists of mammalian class III alcohol dehydrogenases, an enzyme less valices commer: A33419
A;Rolecule type: protein
A;Reference number: A33419; MUID:90105360
A;Residues: 1-373 ckAl>
C;Comment: Class III alcohol dehydrogenases are pyrazole-insensitive, are not very active complex: homodimer; does not form heterodimers with the class I alcohol dehydrogenases
C;Complex: homodimer; does not form heterodimers with the class I alcohol dehydrogenase
C;Complex: homodimer; does not form heterodimers with the class I alcohol dehydrogenase
C;Function: catalyzes the oxidation of primary and secondary alcohols to some cropic complex: homodimer; alcohol dehydrogenase; long-chain alcohol dehydrogenase homology c;Reywords: acetylated amino end; alcohol metabolism; homodimer; alcohol dehydrogenase chi chain #status experimental characterial sacetylated amino end (SCS) #status experimental
F;193-222/Region: beta-alpha-beta NAD nucleotide-binding fold
F;193-222/Region: beta-alpha-beta NAD nucleotide-binding fold
F;193-222/Region: beta-alpha-beta NAD nucleotide-binding fold
F;193-222/Region: beta-alpha beta NaD nucleotide binding fold
F;146,69;173/Binding site: zinc, noncatalytic (Cys, His, Cys) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A Molecule Type: protein A; Residues: 9-25; 84-95, 7x', 97-98, 7x', 187;188,189-193, 7x', 195-198;357-365 < KOI> A; Experimental Source: strain Wistar C; Comment: Class III alcohol dehydrogenases are pyrazole-insensitive, are not very active G; Genetics: A; Gene: ADH-2 C; Complex: A Gene: ADH-2 C; Complex: A Gene: ADH-2 C; Complex: A Gene: ADH-2 C; Complex: A Gene: ADH-2 C; Complex: A Gene: ADH-2 C; Complex: A Gene: ADH-2 C; Complex: A Gene: ADH-2 C; Complex: A Gene: ADH-2 C; Complex: A Gene: ADH-2 C; Complex: A; Description: catalyzes the oxidation of primary and secondary alcohols to aldehy. C; Function: <PDH> alone catalyzes the oxidation by NAD+ of formaldehyde and glutathione to the propertianity alcohol dehydrogenase; long-chain alcohol dehydrogenase homology C; Superfamily, alcohol metabolism; homodimer; metalloprotein; NAD; oxidoreductase; zir F; 25-360/Domain: long-chain alcohol dehydrogenase homology CiADH> F; 189-218/Region: beta-alpha alcohol dehydrogenase homology CiADH> F; 189-218/Region: beta-alpha alcohol dehydrogenase homology CiADH> F; 189-218/Region: beta-alpha alcohol dehydrogenase homology CiADH> F; 189-218/Region: beta-alpha incomparative (Cys, His, Cys) #status predicted F; 92, 95, 98, 106/Binding site: zinc, noncatalytic (Cys) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 J.D.; Rose, D.J.; Potamousis, K.; Apc

        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score
